" GROW ASPARAGUS IN VICTORY GARDENS "

ASPARAGUS ROOTS

GROWN IN CHARLEVOIX COUNTY, MICHIGAN

MARY WASHINGTON variety is strongly recommended as this variety is highly resistant to asparagus rust. The "spears" are large and uniform in size, shape and color.

Asparagus is a heavy feeder and should be kept well fertilized and the tops should be disced under each winter rather than burned off. Weeds can be kept under control by thorough cultivation for the first few years. As soon as the ground can be worked in the spring, disc the tops under and apply manure or commercial fertilizer over the entire asparagus plot and disc or harrow thoroughly in both directions. Weeds rob the soil of moisture and nutrients needed by the crop.

During the first two years cut the best shoots only, during the third season cut for about three weeks, after that the cutting season should extend over six or eight weeks.

Cut asparagus when shoots are six or eight inches above ground and be careful to cut so as not to injure the crown or buds on the rhizomes.

"Mary Washington" one year roots - - - \$1.50 per 100

"Paradise" (extra large spears) one year roots \$2.50 per 100
